PIC® and AVR® Microcontrollers

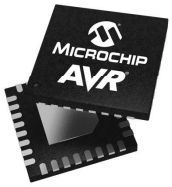

Together Your Possibilities Are Unlimited

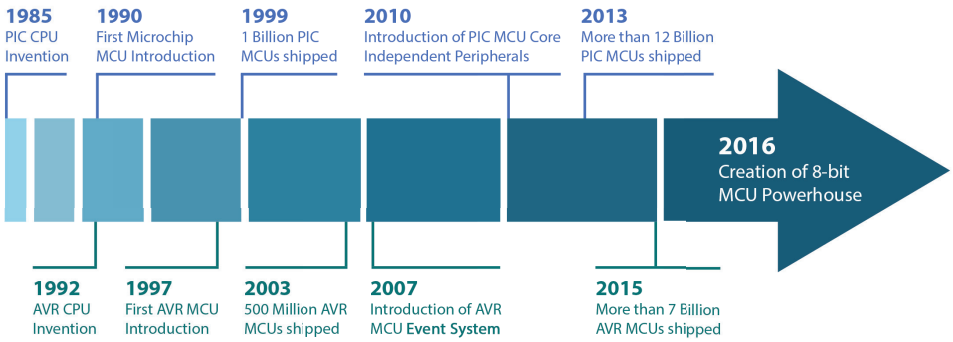

Summary

The PIC® and AVR® MCU brands represent the two dominant architectures in the embedded design universe. With 45 years of combined experience developing powerful and cost-effective MCUs, Microchip is the supplier of choice for thousands of customers worldwide. With a strong history of innovation in 8-bit MCUs via autonomous peripheral integration, Microchip's extensive portfolio can bring increased performance and new features to any application.

PIC® MCU

AVR® MCU

As a designer of innovative products, you have a desire to make technology smart, more efficient and accessible to everyone. Microchip has a passion for developing products and tools that make it easier for you to solve your design problems. Our current lineup of PIC and AVR MCUs is the pinnacle of innovation in the 8-bit embedded space. Incorporated in these MCUs are the latest technologies to handle your next products' features more efficiently and deterministically while reducing power consumption and development time.

Unified Strength

Microchip's portfolio of more than 1,200 8-bit PIC and AVR MCUs is not only the industry's largest, it also offers superior flexibility and performance in areas of utmost importance to modern embedded designers.

Leadership in Embedded Technologies

- Core Independent Peripherals get the job done with minimal CPU overhead
- Intelligent Analog peripherals
- Interconnectivity of analog and digital peripherals
- Industry's lowest power solutions (XLP and picoPower® technologies)
- Robust touch sensing technologies (mTouch® and QTouch® technologies)
- Widest operating range: 1.6V to 5.5V
- Robustness in hostile environments

Consistency of Purpose

- Extensive new investment in both PIC and AVR MCUs
- Innovation in interconnected autonomous peripherals
- Extensive portfolio of support tools
- Intuitive graphical configuration tools, IDEs, compilers and development boards
- Separate and dedicated tool chains for both PIC and AVR MCU development

Longevity and Legacy

- Industry recognition for having the best-in-class product non-obsolescence operating model
- Best-in-class legacy support: package, pin-out and software migration

MICROCHIP

Dedicated PIC and AVR MCU Tool Chains

Microchip Technology offers two best-in-class tool chains for PIC and AVR MCUs. These separate and dedicated development ecosystems will help streamline your next design, from prototype to production. Microchip offers easy-to-use software and hardware development resources to accelerate your next PIC MCU or AVR MCU-based design.

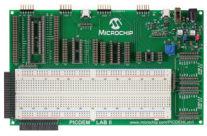

For more information about 8-bit PIC and AVR MCU development tools, please visit www.microchip.com/8bit.

PIC® MCUs		AVR® MCUs
MPLAB® CODE CONFIGURATOR	**Intuitive Graphical Configuration Tools**	Atmel START
MPLAB® X IDE	**Free IDE and Compilers**	ATMEL STUDIO 7
MPLAB® XPRESS IDE	**Simplified Development Environments**	ARDUINO®

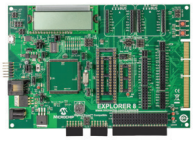

Development Boards

MPLAB® Xpress Evaluation Board (DM164140)

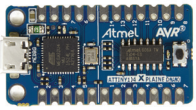

PICDEM™ Lab II Development Platform (DM163046)

Explorer 8 Development Board (DM160228)

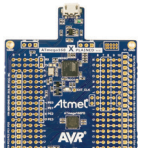

8-bit Curiosity Development Board (DM164137)

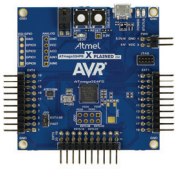

Xplained Nano (ATTINY-XNANO)

STK600 Development Board (ATSTK600)

Xplained Mini (ATMEGA168PB-XMINI) (ATMEGA328PB-XMINI)

Xplained Pro (ATMEGA324PB-XPRO)
